

Creative Catalysts: Integrating ICT Tools to Enhance Everyday Teaching Activities in the Age of AI

Saturday, 27 July 2024 15:55 (1 hour)

Addressing student disengagement, this workshop introduces innovative strategies to integrate ICT tools and AI into everyday classroom tasks. It builds on research that shows how routine activities can lead to boredom and demonstrates how technology can make these activities more engaging. Participants will engage with AI-powered gamification platforms to energise traditional teaching activities like pictionary, board races, dice games and so on. They will also explore collaborative online platforms for group projects and receive peer feedback. The session features live demonstrations and interactive discussions, providing practical insights into using ICT and AI to revitalise classroom activities.

Strategies for integrating technology to enhance student engagement and motivation.

Practical tips for effectively managing and facilitating technology-enhanced learning experiences.

An innovative mindset for adapting familiar activities to leverage the benefits of ICT tools and AI support.

By infusing everyday teaching activities with ICT tools and AI support, educators can create dynamic and personalised learning environments that spark student engagement and achievement in the digital age.
