Introducing Several Padlet's AI Features for Enhanced Learning through Content Creation and Collaboration

Saturday, 27 July 2024 15:00 (45 minutes)

Padlet is a popular digital whiteboard where teachers and students can share ideas and work together in language classrooms. Padlet has recently offered new features using artificial intelligence (AI) to make learning and teaching even better.

There are 8 options to create lessons with AI such as Lesson plan, Classroom activities list, Timeline of events, Reading list, Map of historical events, Assessment polls, Rubric and Custom board. This poster especially presents several ideas using AI in Padlet to use in language classes using several practical ideas in teaching speaking, reading and writing skills. First, the tool **AI art studio** is to spark students' imaginations with the activity Describe It, Draw It. They have exciting opportunities to describe a picture they want to see and Padlet's AI will bring it to real life. This helps them write better and think critically. Second, the tool **Timeline of events** will help students create different pictures and text they can read later. Choose the level of students, provide some information and period of time, then AI in Padlet will generate pictures, videos and texts of the topic given. Finally, the activity **Read & Chat** is to create reading passages about any topics. Students can then turn them into speaking activities, chatting and discussing what they have learned. It's a great way to work together and to enhance learning among students.
