

Harnessing the Power of AI and Digital Tools to Foster Learner Autonomy in ELT

Saturday, 27 July 2024 15:55 (1 hour)

With the rapid advancement of technology, particularly Artificial Intelligence (AI), educators are presented with innovative opportunities to enhance teaching methodologies. AI and digital tools have been proven to foster learner autonomy by providing immediate feedback, personalised learning pathways as well as offering tailored content and adaptive learning experiences. While the abundance of learning tools offers exciting possibilities, many teachers lack the training to integrate them effectively to enhance learner autonomy. This workshop addresses this gap by demonstrating how AI tools can empower students to take charge of their own learning by delving into two key areas. First, participants would be instructed to use Speech Analyzer tools to enhance student autonomy in developing speaking skills through self-assessment and targeted practice. At the subsequent stage, the workshop will showcase the utilization of Classkick to facilitate interactive and personalized learning experiences in various learning contexts. At the end of the workshop, participants will be able to possess the skills and knowledge about some AI tools, practise using them and understand how to integrate them into their teaching, thereby fostering learner autonomy and empowering students on their language learning journey.
