# TeachSmart Wand-ers: AI & ICT Wonders for EFL Wizards

*Friday, 26 July 2024 08:30 (3 hours)*

In the era of the technology boom, teaching English has seemingly become as magical as wielding a wizard's wand in the classroom. However, amidst the plethora of continuously evolving ICT tools and AI supports, even the most magical wand can become overwhelmed. This workshop offers a hands-on approach to simplifying this digital abundance for novice teachers. Participants will first engage with an AI tool named ARI to prompt lesson plans. By engineering specific prompts, teachers will learn to streamline the lesson planning process and integrate AI to create PowerPoint slides efficiently. The workshop will then introduce three user-friendly platforms for effective classroom management. Additionally, teachers will explore how to design interactive activities using Edpuzzle for listening practices, ChatterPix for speaking exercises, and Padlet AI for enhancing writing skills. Unlocking the magic of these innovative tools will transform classrooms into enchanting learning environments. This event promises a transformative journey into the realm of educational magic, equipping teachers with the technology to cast spells of knowledge and creativity, enhancing teaching practices and student engagement to new heights.
